## CASE REPORT

Digital assisted precise  
planning and manufacturing  
of a fixed dental restoration

Dental Technician

### A 66-year-old female patient presented with several decayed, fractured and supraerupted teeth in the upper jaw.

The patient required a fixed prosthetic restoration. This superstructure had to be fixed to implants as well as natural teeth and therefore was in need of a very stable and precisely fitting framework.

Extraction of the hopeless teeth and socket preservation grafting were performed. Five OsseoSpeed EV implants were placed; the two in the molar region were angled by 30 degrees. Afterwards a restoration with high-strength zirconia framework and a precise cutback for the veneering porcelain was digitally designed and fabricated. The patient was very satisfied with the fit and esthetic outcome of the bridge.

**1.** Pre-treatment clinical situation.

**2.** Intraoral condition three months after extraction and grafting.

**3.** Simplant software for planning the implant positions.

**4.** Simplant Guide for the first drilling steps.

**5.** Color-coded HealDesign EV in place.

**6.** Implant Pick-Ups EV in position.

**7.** After impression taking, the interfaces of the impression posts were revealed in the impression.

**8.** Color-coded Implant Replicas EV are assembled to the Implant Pick-Ups EV in the impression.

**9.** Online Atlantis WebOrder showing the Atlantis patient-specific abutments with a digital wax-up transparent overlay.

**10.** Occlusal view of the fullcontour digital wax-up prior to digital cutback.

**11.** Atlantis patient-specific abutments with corresponding screws.

**12.** Full-contour CAD/CAM PMMA provisional restorations.

**13.** Healthy and clean implant sulcus evident at all of the sites to be restored.

**14.** Atlantis patient-specific abutments installed.

**15.** Clinical situation on the day of final restoration.

**16.** The maxillary arch restoration with occlusal and interproximal zirconia.

**17.** Facial view revealing natural looking restorations in place on both teeth and implants.

**18.** A lateral view displaying healthy peri-implant and gingival tissues.

**19.** Radiographs of implants in the molar, premolar and lateral positions, along with the remaining natural dentition.

**20.** The patient's smile following maxillary arch reconstruction of her remaining natural teeth and implants.
